

NIKHITHA BUDIDHA

Computer Science Student | Machine Learning & Generative AI Developer

+91 9063101358 | nikhitha25goud@gmail.com | [LinkedIn](#) | [GitHub](#) | Hyderabad, Telangana

SUMMARY

Computer Science student (2027) with 2+ years of hands-on experience building AI/ML projects. Built RAG-powered document intelligence, YOLO-based road damage detection, and GNN healthcare systems using PyTorch, Hugging Face, and LangChain. Skilled in full-stack development (React, FastAPI, MongoDB) with 100+ LeetCode problems solved. Seeking Machine Learning Engineer or AI/ML Internship opportunities.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL

AI/ML & GenAI: Machine Learning, Deep Learning, Computer Vision, NLP, PyTorch, Scikit-learn, Hugging Face Transformers, LangChain, RAG, Prompt Engineering, Vector Databases, OCR

Web Development: React.js, FastAPI, Node.js, Express.js, HTML, CSS, JavaScript

Databases: MongoDB, MySQL, AWS

Tools & Platforms: Git, GitHub, VS Code, Google Colab, Jupyter Notebook

Core CS: Data Structures & Algorithms, OOP, DBMS

Deployment Tools: Docker, Render, Vercel

EDUCATION

B.Tech, Computer Science & Machine Learning (CSM)

Keshav Memorial College of Engineering | CGPA: 8.0 | 2023–2027

PROJECTS

EnterpriseIQ AI-Powered Enterprise Document Intelligence Platform | FastAPI, React.js, MongoDB, RAG, Hugging Face — [GitHub](#)

- Developed an AI-powered enterprise document intelligence platform using FastAPI, React.js, MongoDB, and Retrieval-Augmented Generation (RAG) for intelligent document understanding.
- Implemented OCR, vector embeddings, and Hugging Face transformer models to support semantic search, document summarization, and contextual question answering.
- Engineered a multi-agent AI architecture for document ingestion, retrieval, reasoning, and task orchestration using LangGraph/CrewAI, enabling scalable enterprise workflows.

Graph Neural Network for Heart Disease Detection | PyTorch, GNN — [GitHub](#)

- Developed a heart disease prediction system using Graph Convolutional Networks (GCNs) to learn patient relationships from structured clinical data.
- Constructed graph-based patient representations and applied graph convolution layers to improve predictive performance over traditional machine learning models.
- Evaluated model performance using Accuracy, Precision, Recall, F1-score, and ROC-AUC, demonstrating the effectiveness of graph-based deep learning for healthcare analytics.

Smart Road Damage Detection System | PyTorch, ViT, MERN — [GitHub](#)

- Built an AI-powered road damage detection system using Vision Transformer (ViT) for damage classification and YOLOv8 for real-time localization of potholes and road cracks with bounding-box detection.
- Developed a full-stack MERN application with MongoDB to enable image upload, automated damage analysis, report management, and authority dashboard for infrastructure monitoring.
- Integrated PyTorch-based deep learning models with RESTful APIs to automate road condition assessment, providing damage classification, confidence scores, and visual detection results.

ACHIEVEMENTS & CERTIFICATIONS

- Solved 100+ coding problems on LeetCode.
- Participated in Codenovate 2024 Hackathon (KMIT) and the internal round of Smart India Hackathon (SIH).
- Organized and coordinated college technical events, managing event planning and team collaboration.
- Certifications: Prompt Engineering (Google).
